

AIR BUSAN selects FlightDeck Simulator A32x from Airlinetools for initial A320 Pilot training

March 2016

AIR BUSAN was established in October 2008 as a regional airliner, based in the southern area of Korea. In eight years, after its first flight departing Busan, the company has expanded the regional sky road to operate nineteen domestic and international routes.

AIR BUSAN currently operates a fleet of A320-200, A321-200 and B737-400.

“After an extensive market research and evaluation of available software tools for ECAM, abnormal procedures training and self-study possibilities, FlightDeck A32x proved to be the optimal solution for our Pilot training”, says Kyungwoo Do from the AIR BUSAN Flight Crew Training Team. “We will use the software primarily in the classroom for initial and conversion training and strongly believe, that FlightDeck A32x will greatly enhance our Pilot training”.

“We are very happy to have AIR BUSAN on board”, says Timo Kläui, Marketing & Sales Director of Airlinetools. Delivering outstanding software, understanding market- and customer needs and committed to a high level of customer satisfaction is our key to success.

About Airlinetools

The Swiss based company provides software solutions for the Airline industry and is the developer of FlightDeck A32x.
